“Drive Smart. Stay Safe. Go the NextMile”

The Problem

Road Safety Crisis

Egypt faces a significant road safety challenge. While fatalities decreased to 5,260 in 2024, injuries rose to over 76,000, highlighting the ongoing risks and costs. (Source: CAPMAS)

76,000+

road accident injuries reported in Egypt in 2024

Driver Monitoring Gaps

Existing systems fail to detect early signs of drowsiness, distraction, and unsafe behaviors before accidents occur.

~3.2% GDP

annual economic cost of road accidents in Egypt (approx. \$10.7B - AUC 2020)

Fragmented Technology

Organizations rely on multiple disconnected systems for telematics, driver monitoring, maintenance, and compliance.

Significant

potential for accident reduction through proactive safety technology in Egypt

“Drive Smart. Stay Safe. Go the NextMile”

Our Solution

NextMile Platform

An AI-powered fleet safety and management platform that combines driver monitoring, vehicle telematics, and predictive analytics to prevent accidents and optimize operations.

Smarter. Safer. More Efficient.

AI Driver Monitoring

Detects drowsiness, distraction, and unsafe behaviors in real-time with 85% accuracy

Predictive Maintenance

Identifies potential vehicle issues 2-3 weeks before traditional diagnostic methods

Integrated Analytics

Combines driver, vehicle, and environmental data for comprehensive safety insights

“Drive Smart. Stay Safe. Go the NextMile”

How NextMile Works

The screenshot displays the NextMile dashboard interface. On the left is a blue sidebar with navigation links: Map Overview, Driver Management, Vehicle Management, Safety Monitoring, Reports & Analytics, and Settings. The main content area is divided into two panels: Driver Management and Vehicle Management. The Driver Management panel shows a list of drivers with their profiles, including names, safety scores, and status (e.g., Driving, Resting, Alert). The Vehicle Management panel shows a list of vehicles with their details, including license plates, fuel levels, last maintenance dates, and assigned drivers. A 'Fleet Manager' section at the bottom left shows the user's name and email.

AI-Powered Driver Monitoring

Computer vision algorithms detect drowsiness, distraction, and unsafe behaviors with 85% accuracy, providing real-time alerts.

IoT Sensor Integration

Connects with vehicle sensors to monitor performance, identify maintenance issues 2-3 weeks before traditional methods.

Cloud Analytics Platform

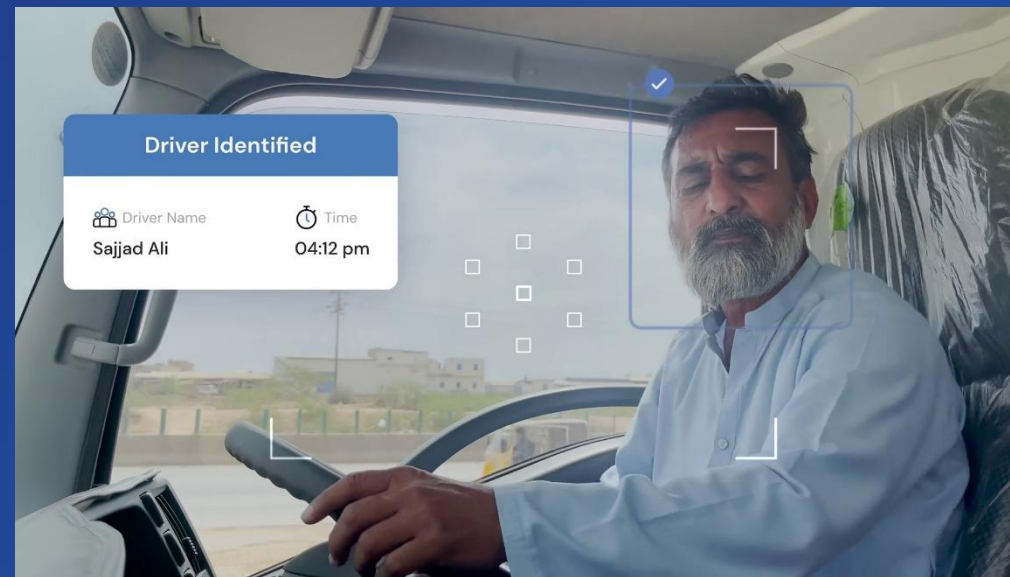

Processes data through sophisticated algorithms to identify patterns, predict risks, and generate actionable safety insights.

Integrated Safety Ecosystem

Cost Breakdown

The costs fall into three main categories: fixed development costs, variable production costs, and recurring operational expenses.

Fixed Cost (MVP Development)

This represents our upfront investment before selling any units, covering hardware R&D, software development, infrastructure setup, and initial operating costs.

Variable (Unit Production) Cost

This encompasses the cost for producing each hardware unit, including materials, components, assembly, quality control, and packaging.

Subscription/Operating Cost

Offering dashboard or cloud analytics features, you'll incur recurring costs for cloud hosting, bandwidth, and support services.

Business Model (Detailed)

Pricing Tiers

Essential

Est. 1500 EGP
/vehicle/month

For small fleets (25-100 vehicles)

- ✓ AI Driver Monitoring
- ✓ Basic Risk Analytics
- ✓ Safety Event Alerts
- ✓ Monthly Reports
- ✓ Email Support

Hardware: \$450/vehicle

Professional

Est. 2200 EGP
/vehicle/month

For mid-sized fleets (100-500 vehicles)

- ✓ Advanced AI Monitoring
- ✓ Predictive Risk Analytics
- ✓ Predictive Maintenance
- ✓ Insurance Reporting
- ✓ Priority Support

Hardware: \$400/vehicle

Enterprise

Custom

For large fleets (500+ vehicles)

- ✓ Full Feature Access
- ✓ Custom Integrations
- ✓ Dedicated Account Manager
- ✓ Advanced Security Features
